

Screwjack opener

The range of screwjack openers available features three main options for sill, head or louvre applications. With a mechanically irreversible action the screwjack system may be utilised for heavy application, its design enables a considerable reduction in load on both the window-gear and the operator handle. Incorporating the ability to sustain a load at the point of application, the screwjack will effect secure tight closing. Non-ferrous aluminium construction of the three types available guarantees maximum working life.
