

# Lockable operator

## LJP Lockable Operator

This operator is ideal for situations where you wish to limit the use of the window controls. The handle is locked in place using a key operated lock and the key can be removed therefore disabling the controls.

Style and efficiency are the main features of this operator.

It incorporates an antitorque spent travel tube which allows a maximum stroke of 250mm.

It is possible to modify this operator for use with the LJP350 chain opener (special order).

Completely made in metal.

Standard colour: White.

Available, at extra cost, sprayed to any specific RAL colour.
