

ESSMANN® Repair Set

Product Description

ESSMANN® Repair Set

The ESSMANN repair set comprises the following tried and tested components: ESSMANN skylight dome and ESSMANN safety frame.

Skylight domes, even those manufactured by other companies, can be repaired with the help of the ESSMANN safety frame by simply replacing them and securing them to the existing skylight base.

ESSMANN skylight domes are made of opal coloured acrylic skins. All sizes are encased in a sturdy kerb frame with internally

moulded drip edge for protection against the elements. The kerb frame protects the edges of the opal-coloured acrylic skins and allows for quick installation of the skylight dome with the help of the functionally reliable hinges.

The skylight domes can be combined with all ESSMANN skylight base versions and are prepared for daily aeration and ventilation.

ESSMANN safety frames consist of a surrounding, aluminium reinforced, corner-welded plastic profile that overlaps the raised roof-

ing membrane on the skylight base by 10 cm.

The ESSMANN repair set can be supplied for all standard ESSMANN skylight dome sizes and is also available for special sizes or for all third-party products on request. The "Renovating and Repairing Skylight Domes" checklist can be used to identify all the necessary information and dimensions.
