

# Manual Sliding Sash Control

The manual sliding sash controls are ideal for windows, which are difficult to reach.

For the elderly and disabled they can be installed to help operate windows, which they may otherwise find impossible to use.

Within public areas these controls increase the safety of use.

Providing the window is in good working order this system can be fitted to aluminium, U-pvc or timber frames and can operate either the top or bottom sash.

Standard stroke 400mm can be modified to larger openings at request.

Available in white or sprayed to any specific RAL colour at extra cost.
